Subject: Application for an International Assignment - Machine Learning & Deep Learning Engineer, Data Scientist, Data Analyst

Dear [REDACTED]

It is with great enthusiasm that I submit my application to undertake an assignment with [REDACTED] starting March 2025, for at least three months in a non-French speaking country. This request is part of my current work-study program at EFREI (École Française d'Électronique et d'Informatique) and aims to validate my degree in Big Data and Machine Learning.

In this context, I primarily wish to seize the opportunity to discover a new professional context, a new organization, its operations, and contribute to its projects. [REDACTED]

That's why I am open to a lasting collaboration, in a form to be defined together, either internationally or in France.

Highly committed and autonomous, with an entrepreneurial profile, I am driven by the desire to serve, as a team, [REDACTED] and its clients.

Today, whether in the context of my training, for the clients of SOPRA STERIA, or those of my AI solutions service company SMARTSQUID, I always seek to improve the existing. Creative and attentive, I use my knowledge of Artificial Intelligence tools to implement pragmatic and effective solutions for internal teams or external clients.

I would be very happy to learn about the history, current operations, and projects of [REDACTED] and to introduce myself in more detail during a video conference, by phone, or at a meeting.

In the meantime, please accept, [REDACTED] the expression of my respectful consideration.

Léonard Gonzalez  
AI & Data Engineer
